## In-Class Workbook

## Geometry: Angles, Triangle, Triangle Classification Unit 8: Workbook Part 2

How do geometric models describe spatial relationships? Why are angles a fundamental building block?

| Standard | Description |
| :--- | :--- |
| 7.G.A.2 | Draw (freehand, with ruler and protractor, and with technology) geometric shapes with given conditions. Focus <br> on constructing triangles from three measures of angles or sides, noticing when the conditions determine a <br> unique triangle, more than one triangle, or no triangle. |
| 7.G.B.5 | Use facts about supplementary, complementary, vertical, and adjacent angles in a multi-step problem to write <br> and solve simple equations for an unknown angle in a figure. |

| Lesson | I can... |
| :---: | :--- |
| $8.1 \& 8.2$ | solve for unknown angles in word problems and in diagrams involving complementary, supplementary, <br> vertical, and adjacent angles. |
| 8.3 | solve for unknown angles in word problems and in diagrams involving ALL learned angle facts. |
| 8.4 | explore the properties of triangles. |
| $8.5 \& 8.6$ | explore how changes in arrangement and measurement affect a triangle, creating a list of conditions that <br> determine anique triangle. |
| 8.7 | apply what I've learned about about angles AND unique triangles to novel scenarios. |

| Packet Completion Rubric |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{4}$ | $\mathbf{3}$ | $\mathbf{2}$ | $\mathbf{1}$ | $\mathbf{0}$ |  |
| Workbook demonstrates <br> significant effort. Student <br> utilizes notes to help <br> extend their thinking, <br> writing questions, <br> comments or reactions to <br> the content. | Workbook <br> demonstrates some <br> effort. Student takes <br> notes but could <br> further understanding <br> by questioning and <br> interacting with the <br> material. | Workbook shows little <br> effort. Student takes <br> notes sporadically, and <br> could benefit from <br> greater consistency with <br> the material. | Workbook shows little <br> to no effort. Student <br> does not take notes and <br> must demonstrate <br> future interaction with <br> the material to aid <br> understanding. | Workbook is entirely <br> incomplete or not <br> turned in. |  |

Grading Breakdown: 3.5-4 = A 3-3.4 $=\mathrm{B} \quad$ 2.5-2.9 $=\mathbf{C} \quad$ 2-2.4 $=\mathrm{D} \quad$ o-1.9 = F

| Unit 8: Angl | , Triangle, Triangle Classification | Lesson 8.5 |
| :---: | :---: | :---: |
| Lesson <br> DO-NOW | 1. Identify the following triangle by its sides and angles: <br> Sides: $\qquad$ <br> Angles: $\qquad$ | Use a ruler and protractor to complete the following problem: <br> Draw complementary angles so that one angle is $35^{\circ}$. Label each angle with its measurement. <br> Are the angles required to be adjacent? |
| Homework Reminder | This is where you will shade in the box if you turned in your homework. Lesson 8.4 homework is due today! :) <br> "Excellence is not an art. It is the habit of practice." - Aristotle |  |
| Check-In | How are you doing today? <br> What career uses geometry the most? |  |

## Triangular Exploration!

Investigation Question: Can you make one or more triangles given any criteria?
Make your initial hypothesis!
CIRCLE ONE: YES OR NO

## Explanation:

$\qquad$
$\qquad$
$\qquad$

End Goal: Find a pattern or create a rule that determines when you are able to create a triangle.

## Directions:

1. Visit each triangle station set up in your classroom.
2. Take note and observe the given criteria for the triangle at your current station.
3. Manipulate the flexible side(s) of the triangle to determine if you can make one or more triangles.
4. Record your observations in the tracker below.

Triangular Exploration Observation Tracker!

| Station \# | Given Criteria (Measurements) | Can you make a triangle? |
| :---: | :---: | :---: |
| $\mathbf{1}$ |  |  |
| 2 |  |  |
| $\mathbf{3}$ |  |  |
| 4 |  |  |
| 5 |  |  |
| 6 |  |  |

Test your hypothesis at the anglegs station!
Jot down any patterns of revisions to your hypothesis here:

Can you think of a rule for constructing triangles given all 3 side lengths?
MY RULE:

Video Notes: Can we ALWAYS make a triangle with the information we are given?

Rule when given side lengths of a triangle:
The $\qquad$ of the two shorter sides must be $\qquad$ than the longest side.

## Examples - Try to make a triangle with the following criteria:

Use your ruler to draw three segments of the following lengths:
$4 \mathrm{~cm}, 7 \mathrm{~cm}$, and 12 cm
Label each segment with its measurement.

Were you able to make a triangle? How does your triangle compare with the rest of the class?
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

Now...Use your ruler to draw three segments of the following lengths:

## $8 \mathrm{~cm}, 7 \mathrm{~cm}$, and 12 cm

Label each segment with its measurement. If you're able to construct a triangle, use your protractor to measure each angle in your triangle.

Were you able to make a triangle? How does your triangle compare with the rest of the class?
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Try it Out!

Directions: Place a checkmark under Triangle or Not a Triangle according to the given side lengths.

| Sides |  | Triangle | Not a Triangle |  |
| :---: | :---: | :---: | :---: | :---: |
| $\mathbf{a}$ | $\mathbf{b}$ |  |  |  |
| 1 | 5 | 8 |  |  |
| 4 | 4 | 9 |  |  |
| 3 | 4 | 5 |  |  |
| 3 | 4 | 7 |  |  |
| 7 | 8 | 10 |  |  |
| 5 | 6 | 8 |  |  |
| 2 | 4 | 7 |  |  |
| 6 | 9 | 10 |  |  |

Think about this question....
Can you make more than one triangle when given the three side lengths?

Thoughts...?

| Guided Practice |  |

Did I stay focused and on task today?
Teacher Initials: $\qquad$

| Unit 8: Angl | , Triangle, Triangle Classificat | Lesson 8.6 |
| :---: | :---: | :---: |
| Lesson 8.6 DO-NOW | When studying triangles, it is essential to be able to communicate about the parts of a triangle without any confusion. <br> The following terms are used to identify particular angles or sides: <br> - adjacent to <br> - opposite to <br> - included within [side/angle] | Use the figure $\triangle A B C$ to fill in the following blanks: <br> 1. $\angle \mathrm{A}$ is $\qquad$ sides $\overline{\mathrm{AB}}$. <br> 2. $\angle B$ is $\qquad$ side $\overline{\mathrm{AB}}$ and to side $\overline{\mathrm{BC}}$. <br> 3. Side $\overline{\mathrm{AB}}$ is $\qquad$ $\angle \mathrm{C}$. <br> 4. Side $\qquad$ is the included side of $\angle B$ and $\angle C$. <br> 5. $\angle$ $\qquad$ is opposite to side $\overline{\mathrm{AC}}$. <br> 6. Side $\overline{\mathrm{AB}}$ is between $\angle$ $\qquad$ and $\angle$ $\qquad$ . <br> 7. What is the included angle of sides $\overline{\mathrm{AB}}$ and $\overline{\mathrm{BC}}$ $\qquad$ |
| Homework Reminder | This is where you will shade in the box if you turned in your homework. Lesson 8.5 homework is due today! :) <br> "Excellence is not an art. It is the habit of practice." - Aristotle |  |
| Check-In | How are you doing today? <br> Do you like geometry better than al |  |

## Unique Triangle

A unique triangle is a triangle that doesn't have an equivalent. It's $\qquad$ .

What makes a triangle unique? You are given certain criteria that

Unique Triangles

| Abbreviation | Condition (Known Parts) | Picture |  |  |
| :---: | :---: | :---: | :---: | :---: |
| SSS |  | SSS |  |  |
| Which of these triangles would make an SSS unique triangle? (Circle and show your work): |  |  |  |  |
| A triangle with the sides 4, 4, 9? |  |  |  | A triangle with the sides 3, 4, 6? |

Workspace:
SAS

A triangle DEF has an angle of 40 degrees included between sides with lengths of 4 cm (side DE) and 7 cm (side DF). How would you construct this triangle?

Workspace:

NOT Unique Triangles

| Abbreviation | Condition (Known Parts) | Picture |
| :---: | :---: | :---: |
| AAA |  |  |
| SSA |  |  |

Conditions of a Unique Triangle

| Abbreviation | Information Given | Unique Triangle? |
| :--- | :--- | :--- |
| SSS | Side, Side, Side | YES |
| SSA | Side, Side, Angle | NO |
| SAS | Side, Angle, Side | YES |
| SAA | Side, Angle, Angle | YES |
| ASS | Angle, Side, Side | NO |
| ASA | Angle, Side, Angle | YES |
| AAS | Angle, Angle, Side | YES |
| AAA | Angle, Angle, Angle | NO |

Challenge: How many triangles are there?

## Guided Practice

Three students are given attributes about a triangle and make a conclusion based on their information. For each scenario, decide if you agree or disagree with their statement and explain your reasoning.

| Scenario \#1 $50^{\circ}, \mathbf{6 0}{ }^{\circ}, 70^{\circ}$ | Scenario \#2 6 in, 8 in, 10 in | $\begin{aligned} & \text { Scenario \#3 } \\ & 5 \mathrm{~cm}, 5 \mathrm{~cm}, 50^{\circ} \end{aligned}$ |
| :---: | :---: | :---: |
| Robbie claims that only one triangle can be made with those angle measures. | Omar claims that you can draw multiple triangles using the same side lengths. | May claims that she can draw two triangles with those measures. |

## Workspace for drawing triangles:

| Scenario | Answer | Reasoning |
| :---: | :---: | :--- |
| 1 |  |  |
| 2 |  |  |
| 3 |  |  |

## Guided Practice

Determine if a unique triangle is formed.

4 cm

Workspace:

| Scenario | Answer | Reasoning |
| :---: | :---: | :--- |
| 1 |  |  |
| 2 |  |  |
| 3 |  |  |
| 4 |  |  |

## Guided Practice Continued:

DIRECTIONS: Complete the table below given the following conditions for a triangle. Use a separate piece of paper to draw your triangles to determine whether it's a (1) Unique Triangle, (2) Can form more than one triangle, or (3) Not possible to form a triangle. Lastly, fill in the reasoning box as to why you selected the type of triangle.

| Information | Triangle possible? | Check | Reasoning |
| :---: | :---: | :---: | :---: |
| Angle $B=50^{\circ}$, <br> $A C=3 \mathrm{~cm}$, <br> $B C=5 \mathrm{~cm}$. | Unique Triangle? <br> More than one triangle <br> Not possible |  |  |
|  |  |  |  |
|  |  |  |  |
| $\begin{aligned} & \mathrm{AB}=10 \mathrm{~cm} \\ & \mathrm{BC}=11 \mathrm{~cm}, \\ & \mathrm{AC}=9 \mathrm{~cm} . \end{aligned}$ | Unique Triangle? <br> More than one triangle <br> Not possible |  |  |
|  |  |  |  |
|  |  |  |  |
| Angle $A=40^{\circ}$, Angle $B=60^{\circ}$, Angle $C=80^{\circ}$. | Unique Triangle? <br> More than one triangle <br> Not possible |  |  |
|  |  |  |  |
|  |  |  |  |
| d. | Unique Triangle? <br> More than one triangle <br> Not possible |  |  |
|  |  |  |  |
|  |  |  |  |

| Unit 8: Angl | , Triangle, Triangle Classification |  | Lesson 8.7 |
| :---: | :---: | :---: | :---: |
| Lesson <br> 8.7 <br> DO-NOW | 1. Using the image name a pair of vertical angles. <br> 2. Using the image name a pair of supplementary angles. |  | $\rightarrow$ |
| Homework Reminder | This is where you will shade in the box if you turned in your homework. Lesson 8.6 homework is due today! :) <br> "Excellence is not an art. It is the habit of practice." - Aristotle |  |  |
| Check-In | How are you doing today? <br> What is your favorite or least favorite part of geometry so far? |  |  |

## Let's Practice! - Stations

## Directions:

1. You will complete the problem set at each station.
2. You MUST work as a group to complete the practice problems.
3. You will have 15 minutes at each station, so work efficiently.

As you work through each station, check it off below:

- \#1: Types of Angles and Label Angle Drawings
- \#2: Solving for Unknown Angles
\# 3: Unique and Not Unique Triangles
- \#4: Drawings

## Station \#1: Types of Angles and Label Angle Drawings

DIRECTIONS: Identify these angles as either complementary or supplementary angles. Then find the measure of each numbered angle.

WORK SPACE:

1. Three lines meet at a point. In a complete sentence, describe the relevant angle relationship in the diagram. Set up and solve an equation to find the value of $a$.

2. Two lines meet at a point that is also the endpoint of a ray. In a complete sentence, describe the relevant angle relationships in the diagram. Set up and solve an equation to find the value of $p$ and $r$.

3. Three lines meet at a point. In a complete sentence, describe the relevant angle relationships in the diagram. Set up and solve an equation to find the value of $z$.

4. What is the relationship between vertical angles?

Station \#2: Solving for Unknown Angles

## COMPLEMENTARY AND SUPPLEMENTARY ANGLES

Write and solve an equation to determine the missing angle measures. Determine the value of $x$, then find the answer and color it the corresponding color.
(

| RED | YELLOW | PINK | BLUE | LIGHT <br> GREEN | ORANGE | DARK <br> GREN | PURPLE |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $45^{\circ}$ | $40^{\circ}$ | $22^{\circ}$ | $147^{\circ}$ | $100^{\circ}$ | $60^{\circ}$ | $15^{\circ}$ | $59^{\circ}$ |
| $67.5^{\circ}$ | $79^{\circ}$ | $30^{\circ}$ | $78^{\circ}$ | $50^{\circ}$ | $87^{\circ}$ | $28^{\circ}$ | $36^{\circ}$ |

VERTICAL \& ADJACENT ANGLES
Name: $\qquad$ Date: $\qquad$
Maze \#| Instructions: Write and solve an equation to find the missing angle measure, $x$. Shade or color your path as you go.

Station \#3: Unique and Not Unique Triangles

## CONDITIONS OF A TRIANGLE

Each of the 10 cards will have statements from two students. Read carefully and choose the name of the student who made the correct statement. Then, Justify your answer in the space provided.

| (1)__ is correct because... | (2)__ is correct because... |
| :---: | :---: |
| 3 (3) is correct because... | (4)__ is correct because... |
| 5 (5)_ is correct because... | 6 ___ is correct because... |
| (7) is correct because... | 8 ___ is correct because... |
| (9)__ is correct because... | (1) |

## Station \#4: Drawings

DIRECTIONS: Use a ruler and a protractor to complete the following problems.

1. Draw a segment $A B$ that is 5 cm in length and perpendicular to segment $C \mathrm{D}$, which is 2 cm in length.
2. Draw supplementary angles so that one angle is $26^{\circ}$. Label each angle with its measurement.
3. Draw $\triangle A B C$ so that $\angle B$ has a measurement of $100^{\circ}$.
4. Draw an isosceles $\triangle A B C$. Begin by drawing $\angle A$ with a measurement of $80^{\circ}$. Use the rays of $\angle A$ as the equal legs of the triangle.
Choose a length of your choice for the legs and draw them. Label each marked point with $B$ and $C$. Label all angle measurements.
5. Draw an isosceles $\triangle D E F$. Begin by drawing a horizontal segment $D E$ that is 6 cm in length. Use your protractor to draw $\angle D$ and $\angle E$ so that the measurements of both angles are $30^{\circ}$. If the non-horizontal rays of $\angle D$ and $\angle E$ do not already cross, extend each ray until the two rays intersect. Label the point of intersection $F$. Label all side and angle measurements.
6. Draw vertical angles so that one angle is $125^{\circ}$. Label each angle formed with its measurement.
7. Draw complementary angles so that one angle is $35^{\circ}$. Label each angle with its measurement. Are the angles required to be adjacent?
8. Use your ruler to draw three segments of the following lengths: $4 \mathrm{~cm}, 7.2 \mathrm{~cm}$, and 12.8 cm . Label each segment with its measurement.

## Workbook Reflection

Answer the question as completely as possible, using evidence from what we have learned this unit. Justify your response with examples and evidence from throughout the packet.

How can we classify triangles? What are the classifications we learned about?

Choose one of the following concepts and describe it. Include visuals to support your answer.

- Unique triangles
- Finding unknown angle measures
- Types of angles
$\square$

What lesson most challenged your thinking?

What would you have done differently?

Flip through your packet, and look to see if you shaded the box every day for turning in your homework. How many days did you shade it in?

| Lesson 1 | Lesson 2 | Lesson 3 | Lesson 4 | Lesson 5 | Lesson 6 | Lesson 7 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

If you didn't finish it each night, consider why $\rightarrow$
Would you like to come in during lunch or recess for support?
